Role:

It's mainly about infrastructure management like server, storage, network, application middle ware, security, database, devops support.

IMTS (INFRASTRUCTRE MANAGEMENT and TECHNICAL SUPPORT)

Mindtree Infrastructure management optimize performance and availability as well as quickly resolves issues.

Infrastructure management is sometimes divided into categories of systems management, network management, and storage management. Infrastructure management products are available from a number of vendors including Hewlett-Packard, IBM, and Microsoft.

Among other purposes, infrastructure management seeks to:

- Reduce duplication of effort
- Ensure adherence to standards
- Enhance the flow of information throughout an information system
- Promote adaptability necessary for a changeable environment
- Ensure interoperability among organizational and external entities
- Maintain effective
- change management policies and practices

Although all business activities depend upon the [infrastructure](), planning and projects to ensure its effective management are typically undervalued to the detriment of the organization. According to IDC, a prominent research firm (cited in an article in *DMReview*), investments in infrastructure management have the largest single impact on an organization's revenue.
